Five more daytime burglaries reported: Bandits kick in doors, snatch flat-screen TVs in unoccupied houses...

Burglars kick in doors at two Brandermill homes, steal jewelry...

CHESTERFIELD, VA (WWBT) - Crooks kick their way into two Brandermill homes in broad daylight. The crimes happened Monday on Cove Ridge Road and Copper Hill Place in Chesterfield. The homes are less than two miles apart. In both cases, doors were kicked in and the culprits got away with jewelry. Read more here: <http://www.nbc12.com/Global/story.asp?S=13865805#>

Home invasions and residential burglaries are dramatically on the rise. You hear about them on the news all of the time. The reason is simple. It is the most lucrative, least risky activity of all for criminals. Once someone invades a home it is almost impossible to be detected by the police. According to the latest FBI statistics, only 12.4% of burglars are ever caught, charged and convicted.

The latest crime statistics on home invasions, burglaries and robberies in the United States are staggering...

- ⊗ 6,088 Home Burglaries Per Day in the USA
- ⊗ 70.3% of Burglaries Involve Residential Properties
- ⊗ 73.9% of Burglaries Involved Forcible Entry
- ⊗ 38% of All Assaults Occur During a Home Invasion
- ⊗ 60% of All Rapes Occur During a Home Invasion
- ⊗ \$4.6 Billion Worth of Property is Stolen Annually

The FBI Says: "Every 12 Seconds a Home is invaded By Someone Simply Going Right Through the Door"

74% of Burglars Kick-in Doors, And It Can Take Less Than 1 Second!

Entry Door frames cannot be just reinforced to Stop a Robbery From a Door Kick-In!

The **Deadbolt Security Anchor** uses the door structure for strength ...Easily, Permanently and Inexpensively.

Many have replied with, **"I Have a Burglar Alarm System, Won't That Protect Me?"**

Burglar alarms don't provide any real protection. That's why they are called BURGLAR ALARM SYSTEMS and not BURGLAR PROTECTION SYSTEMS. Though we do recommend burglar alarm systems, they won't protect you against an "After-The-Fact" home invasion. An alarm system

only tells you that burglars are already inside your home or are seriously trying to get in. With home invasions on the rise across the country, police are working harder than ever but they just can't keep up.

Due to a shortage of manpower from rising costs, in many states across the country, the police are not even responding to home alarms anymore because about 98% are false alarms. Because of this, some localities even charge the homeowner \$100 and upwards if they respond to a false alarm from an electronic security system on a residence. Even if the police do respond, response time is typically on average about 30 minutes. Statistics show that if something bad is going to happen (kidnapping, rape, assault, murder, and robbery) it's most likely going to happen within the first 15 minutes. Therein lies another problem.

Criminals know this all too well. Burglar alarms only tell you a crime is happening or has happened. It doesn't keep intruders out! The Deadbolt Security Anchor is always on duty. It provides super-enhanced physical strength and security CONSTANTLY each time the door is closed, turning your doors into home security doors. This one-step alone will greatly deter or prevent through-the-door forced entries so you and your family will sleep safer in the future. Worst of all, if your home is burglarized, it stands a 50% greater chance of being burglarized again within the next 6 months. Why? Because the burglars know that now you have all new stuff.

The Deadbolt Security Anchor is door security hardware that you only pay for once - unlike an alarm system; there are no codes to keep up with, no false alarm sirens and no monthly monitoring fees to worry about.

Think about this. How many times have you seen the police on reality crime shows kick in doors? A lot, right? Well if a man in a police uniform can do it that easily, then why can't a burglar also do it that easily? The fact of the matter is you don't want strangers to be able to easily gain entry into your home. Home door security is a **"MUST DO"** item on all homes!

Why Are Doors So Easily Kicked-in or Forced Open?

It all comes down to one critical design flaw and it's found on virtually every exterior residential door entryway. Most exterior doors, hinges, deadbolts and door locks are strong. It's the WOODEN DOOR FRAME that is the weakest area. Door frames are most often constructed from softwood trees such as Pine, Spruce and Fir.

These soft woods can't withstand the force of a 1/2 inch to 1 inch solid steel deadbolt stem being massively forced against them as happens when a door is kicked in.

Most door hinges and strike plates are only attached to 1/2" thick, soft wood door trim using small, short, weak 1/2 inch brass screws. As you can see in the illustration above, most doors are not truly even attached to the wall itself (the 2 x 4 studs), but only to the soft wood trim. The air space is there to allow 'squaring' of the door frame so the door will hang level, open, and close properly.

Nobreach has created a revolutionary design for a security strike plate that uses the actual structure of the doorway rather than trying to reinforce the 1/2 inch door frame as other devices do.

Using 16 gauge cold rolled steel this industrial strength strike plate uses both 2x4s to anchor the faceplate onto the door frame. Break-ins would require either both 2x4s to break or tear the plate's 9000 psi rating. With its unique adjustable replacement cleat design the Deadbolt Security Anchor is quick and easy to install and does not require adjustments of the door or door frame. It is visible from the exterior acting as a deterrent.

Remember, "A deadbolt is only as good as its strike plate."™, so get the best!!!

A valuable additional feature of the Deadbolt Security Anchor is the ability to create safe-rooms inside the residence. A bathroom or closet can be easily and cheaply be created into a safe-room. Replacing the existing hollow core door with a solid core or steel door, and replacing the strike plate with a Deadbolt Security Anchor would fortify the

entryway making it virtually impenetrable. Being inexpensive, more than one safe-room can be installed. (i.e. master bathroom or closet, hall bathroom or closet.). Use these safe-rooms to protect your Family, Guns, Food storage and anything of value to you.

- Fits most standard door sizes;
- Installs on your new or existing doorways;
- Can be installed in about 30 minutes by most homeowners and may qualify for homeowner's insurance discount;
- Effectively repairs broken door frames. No need to replace the door frame;
- System package includes a step by step instruction guide & hardware;
- Purchase and install it today to protect your family and home;
- Made in the USA by Nobreach LLC.

In Medieval times, a castle's entrance was often guarded by a reinforced front gate that could be lowered to bridge a moat. In today's times, our need for both bridge and barrier hasn't changed much. Today, our homes' entry doors essentially serve the same purposes, providing both security and a welcoming connection to friends and family.

The **Deadbolt Security Anchor** is a new design of a locking system that will easily strengthen a doorway and provide increased security. This durable unit prevents attempted forced entry to most doorways. The device's visible component will deter criminals from entering premises because the construction appears strong.

The **Deadbolt Security Anchor** can be used with most common model makes of lockset bolts and deadbolts. It could be used in multi-family homes, businesses, hotels, motels, restaurants and retail stores.

The **Deadbolt Security Anchor** is an inexpensive way for most people to protect their homes.
